About Me: *My eight years of experience as a Front End Developer for different companies has honed my JavaScript, jQuery, Angular, Bootstrap, CSS3 and HTML5 skills, as well as my knowledge of mobile and responsive design.*

My professional experience includes bringing the wireframes of the UX designer to life through HTML5 and CSS3, as well as collaborating with Back End Developers to create a stellar finished product. I think my skills and experience makes me a great fit.

I know how important the details are for a Front End Developer. My keen attention to detail and dedication to solving any problem at hand are what separates me from other candidates with similar qualifications, also I have a good hand in designing Psd web layouts as a plus that makes me an independent resource for the team .

I started my career in Multan, Pakistan and worked for multiple software houses. Now I am located & working in Lahore for more than three years. I have been also working for the international marketplace Envato (http://market.envato.com/) for more than 5 years as an author on themeforest.net (http://themeforest.net/). I have more than 60 approved items there. Visit my online portfolio in the link given at the bottom . I primarily consider myself a UI/UX developer, but I can design web layouts PSD's too as working for themeforest has taught me the typographic sense, using the eye catching colors and utilization of white spaces in the design. So, that's make me an independent UI/UX resource who can design and convert it into HTML & create interactive themes and templates by using front-end framework like Angular.

In my current role, beside development i am also responsible for my team performance, assigning tasks to the team, and reviewing their code to ensure the quality and flexible code.
